# MBT-MIL.SF Data Sheet

Easy to understand LED display

> Test results in seconds

Self-storing probe and lead wire

# **Features**

- Computes State of Charge (SOC) for more than 40 battery types
- Easy to use no switches or settings
- Test battery condition quickly and easily identifies weak or failing batteries
- Patented high accuracy Pulse Load test battery safe, non-invasive
- Measures battery performance under load, not just voltage or internal resistance
- Ideal for battery management and cell matching reduce costs and increase reliability
- Made in U.S.A. Patents 6,823,274 and D569285

# Description

The ZTS MBT-MIL.SF provides a comprehensive means of testing the state of charge or state of power for more than 40 battery types, including 9-volt lithium batteries. This microprocessor-controlled instrument is designed for commercial or home use and tests popular primary (non-rechargeable) and rechargeable batteries using a patented, high accuracy pulse load test. After a fully automatic test cycle, percentage of remaining battery capacity is indicated on the LED bar display. Battery types are clearly labeled next to appropriate contacts. The negative test lead/probe conveniently stores in seam at side. It's easy to use, and test results are easy to understand. Tests NiMH, Li-Ion, alkaline, lithium, coin cell, button type and more. Requires 4AA batteries (not included).
